1 EVENTS ON THE FINANCIAL MARKET IN THE PAST PERIOD

1.1 Trends on the financial market in the Republic of Macedonia

On November 23, 2006, Ministry of Finance issued 3-year government bond for the first time. Amount of Denar 300 million was offered at the auction, and the demand therefor was Denar 290 million. Weighted yield of 9,621% was achieved at the auction and in relation to the weighted yield of the 2-year government bond achieved on the auction held at the end of October, it is by 0,30 percentage points higher. Banks had dominant share of 80% in the ownership structure, while the remaining part accounts for non-banking entities, with a significant share of pension companies in the realization at the auction.

The Ministry of Finance, on December 29, 2006, made early buyback of the 5-year Continuous government bond no. 2 in 2005, ISIN MKMINF20N016. The bond was bought back at nominal value, and the due coupon amount for the last year was paid. The Ministry of Finance has decided to do so on the basis of the current favorable budget position, as well as on the fact that the early buyback in the next four years the Ministry of Finance will make savings in interest.

Interest rates in the past two-month period grew in December, after the insignificant decline in early November. This refers both to 3-month government securities and 6-month government securities. Interest rate on 3-month government securities after the decline in November from 6,31% to 6,10%, at the end of the year reached a level of 6,36%, which is an increase by 0,26 percentage points.

Similar trends of interest rates were noticed at 6-month government securities, which after the slight decline in November, at the last auction held in December grew to 7,02%. There was insignificant rise in the interest rates on 12-month government securities, whereby the achieved 8,86% interest rate is by 0,20 percentage points higher than the interest rate achieved at the auction held in September.

Comparative analysis of the trends in the interest rates on government securities in 2005 and 2006 suggests a declining trend. Weighted interest rate of the 3-month treasury bills achieved at auctions in December 2005 was 8,00%, while the same interest rate achieved at auctions in the same month in 2006 declined by over 1,5 percentage points and was 6,26%. Weighted interest rate on 6-month treasury bills in December 2005 was 8,81%, and by constant decline during the year, it reached 7,02% in December 2006. The trend of interest rates is the same in other government securities.

Public Debt Management Department*

1.2 Presentations at the government securities market

The Ministry of Finance in this period will continue with presentations on government securities. During the FINEXPO fair, held in early December 2006, the Public Debt Management Department made presentation on the functioning of the government securities market in the Republic of Macedonia. The presentation was educational, providing information for the broader public to get familiar with the novelties introduced on the government securities market in the past period, as well as on the novelties planned for the next year on the government securities market.

This presentation is a part of the series of presentations the Public Debt Management Department made during 2006. They are aimed at deepening the government securities market and extending the investor base and they will be organized also in 2007.

Average time to maturity-ATM* of continuous government securities

*Average time to maturity (ATM) is an indicator showing the refinancing risk, which is especially relevant when the debt should be refinanced by additional issuance of new public debt. ATM shows the average length of time until maturity of securities and the sensitivity of fixed-income funds to the interest rate variations. The longer the period of time of ATM, the greater the sensitivity to the interest rate variations.

	Treasury bills		Government bonds				Total	
	31 st of October 2006	31 st of December 2006	2 years		3 years		31 st of October 2006	31 st of December 2006
Duration*	31 st of October 2006	31 st of December 2006	31 st of October 2006	31 st of December 2006	31 st of October 2006	31 st of December 2006	31 st of October 2006	31 st of December 2006
Average days	96,43	104,95	533,62	521,46	0,00	973,98	335,20	200,49
Average years	0,26	0,29	1,46	1,43	0,00	2,67	0,92	0,55

*Duration is an indicator showing the risk of interest rate variations. More precisely, this indicator shows how soon the interest rate changes would affect the debt-related cost, i.e. what is the change in the value of the fixed-income securities resulting from 1% variation in interest rates. When expressed in years, 5-year duration means that the value of the securities would grow by 5% should the interest rates decline by 1% and vice-versa.
